

Mounir DABIRE

49124, Angers, France — open to remote and on-site roles across France

mounirdabire47@gmail.com | Portfolio: [Mounir DABIRE](#) | LinkedIn: [W. Mounir Ménahe DABIRE](#)

AI Engineer, AI Developer — Python, production AI agents, RAG, MCP, LLMs and Azure Cloud; available from 10 October 2026

TECHNICAL AND LANGUAGE SKILLS

Programming: Java, Python, FastAPI, APIs, SQLAlchemy, HTML5, CSS, JavaScript, TypeScript, React, Tailwind CSS.

AI: AI agents, multi-agent systems, tool calling, configuration-driven multi-bot architecture, MCP / FastMCP, RAG, embeddings, vectorisation, vector search (Azure AI Search in production, Qdrant), semantic search, Prompt Engineering, OpenAI, Claude AI, Google Gemini, Mistral AI, Hugging Face, Ollama, ElevenLabs, Deepgram.

Big Data: Data Lakehouse, Data Lake, Data Warehouse, batch and streaming pipelines, SQL (MariaDB, MySQL, Oracle, SQL Server, SQLite), NoSQL (MongoDB), CockroachDB, Parquet, Neon, Supabase, Apache Hadoop, Apache Spark, Apache Kafka, Dataiku, Power BI.

Tools: Microsoft Office, Slack, Git, PyCharm, Visual Studio Code, IntelliJ, Figma, Google Stitch, Codex, Claude Code, Antigravity, Claude Design.

DevOps & Cloud: GitHub Workflows, Azure Pipelines, CI/CD, dev/staging/production pipeline, Docker, Microsoft Azure (DevOps, Web App, AI Foundry, AI Search), Microsoft Graph, Azure AD (MSAL, Easy Auth), AWS (ECS, Lambda, S3, Bedrock), Render, LiveKit, production deployment and monitoring, versioned database migrations, unit, integration, load and end-to-end testing.

Languages: French (native), English (fluent, TOEIC 910/990), Mooré (native), German (beginner).

PROFESSIONAL EXPERIENCE

AI Developer

April 2026 - Present

ESSCA, Angers, France

- Maintain and evolve ESSCABOT in production — the school's AI teaching assistant — together with its administration tool: a single engine serves multiple courses, each agent having its own corpus, prompt and model.
- Orchestrate the RAG chain on Azure AI Search: per-course indexing of institutional sources (LMS platforms), vector search, answers cited back to their source; proprietary and open-source models interchangeable by configuration, which keeps their usage cost under control.
- Control access to the agents: faculty, student and staff profiles differentiated through Microsoft Graph and Azure AD (MSAL, Easy Auth), with distinct permissions.
- Support business units from requirements gathering through to production, and guide users with no prior AI expertise to independent use.
- Industrialise and secure operations on Microsoft Azure: dev/staging/production pipeline on Azure Pipelines, monitoring, incident management, versioned migrations and load testing.

Full-Stack AI Developer - Final-Year Project

September 2025 - February 2026

ESSCA, Angers, France

- Design and deliver to production the current version of ESSCABOT: database-driven multi-bot architecture, where each agent receives its own corpus, prompt, model and features.
- Develop the complete stack: Python backend (FastAPI, REST API), an application providing access to the agents, a React interface in TypeScript based on Figma mock-ups, and real-time voice chat (LiveKit, Deepgram, ElevenLabs, avatar).
- Deploy securely on Microsoft Azure, with a revocable informed-consent protocol for users.

Full-Stack Developer Intern

April 2025 - July 2025

ESSCA, Angers, France

- Develop and deploy an internal RAG-based HR tool: employee information retrieved through the Microsoft Graph API, searchable in natural language without technical queries.
- Take over, update and redeploy the previous version of ESSCABOT.

PERSONAL PROJECTS

UrdWell — Long-Term Memory MCP Server for Coding Agents

June 2026

Open-source server (Apache-2.0) giving Claude Code, Claude Desktop, Codex and Gemini CLI persistent memory across sessions. LongMemEval was adopted as the evaluation protocol after a review of the field (MemGPT, Mem0, A-Mem, Zep): complementing vector search (standard cosine similarity) with BM25 and RRF fusion raises top-1 recall from 0.55 to 0.60 across 419 questions; index reuse cuts the complete evaluation run from 60 hours to 8.8 hours. A one-line installer detects each installed agent and wires it in. *Python, MCP, ONNX embeddings, Parquet, end-to-end testing.*

HindSight — Temporal Decision Accountability for AI Agents

August 2026

Open-source system (Apache-2.0) that reconstructs what was true, what an agent could know and what it actually retrieved, in order to judge whether its decision was defensible at that moment. Reference case: a telecom billing dispute caused by a late retroactive tariff, where the verdict separates a culpable error from one that was not knowable. Bi-temporal fact versions that are never overwritten, a bounded tool-calling agent loop over a single read-only tool, procedural memory kept out of the financial calculation, and a 35-scenario benchmark across seven verdict families. A full audit measured at 8.5 s on the deployed service, against 15.0 s driven from outside the cluster region. *Python, FastAPI, CockroachDB (bi-temporal, distributed vector index), AWS Bedrock, managed read-only MCP, ECS, Lambda, S3, WAF, Docker.*

EDUCATION

ESAIP, School of Engineering, France

2022 – 2026

Engineering Degree (English-taught programme) *Specialisation: Big Data*

RWU, Hochschule Ravensburg-Weingarten, Ravensburg, Germany

September 2024 – February 2025

ERASMUS Exchange Programme

KTU, Kaunas University of Technology, Kaunas, Lithuania

January 2023 – June 2023

ERASMUS Exchange Programme
